

Zook User Handbooks

Owner Handbook

You own the business. Use the web dashboard for setup, reporting, billing, and control. Use the mobile owner view for quick daily decisions.

Where Owners Work

Surface	Use it for	Best device
/dashboard	Daily command board, members, staff, plans, reports, billing	Laptop / desktop
/dashboard/attendance/qr-display	Entrance QR display	Tablet / desktop screen
Mobile /owner	Approvals, revenue pulse, stock, quick member checks	Phone
/g/[username]	Public gym profile members see	Any browser

Production testing rule: read-only checks are safe anywhere.

Create/update/delete/payment/refund/suspend tests should be done only on a test gym or staging data.

First 15 Minutes

1. Sign in → /dashboard
2. Confirm gym profile: Settings + Public Profile
3. Confirm membership plans: Plans
4. Confirm staff access: Staff
5. Confirm QR entry: Attendance → QR Display

6. Confirm billing: Billing

7. Confirm reports: Reports → Export CSV

✓ A healthy owner account should show: active members, revenue, renewals due, check-ins, approvals, staff, branch context, and audit history.

Web Dashboard Map

Section	What to verify tomorrow	Notes
 Today	Metrics load, alerts make sense, quick actions open the right area	This is the owner command board
 Members	Search, filters, member detail, approvals, bulk actions	Check expired and active members
 Plans	Plans list, create/edit form, public visibility, pricing	Avoid changing real production prices unless intended
 Coupons / Offers / Referrals	Codes display, create forms open, reward rules are clear	Use test codes for production smoke
 Attendance	Recent scans, exceptions, QR display	QR refresh should be visible
 Payments	Revenue rows, offline payment form, refunds view	Do not issue real refunds in smoke
 Shop	Products, stock, orders, pickup status	Confirm cart-facing items are public where expected
 Reports	Attendance/revenue/member exports download	CSV should open cleanly
 Staff	Invite admin/reception/trainer, branch assignment	Reception must have a branch
 Branches	Branch list, hours, location, primary branch	"Primary" is the user-facing term
 Notifications	Templates, history, composer, targeting	Do not send mass messages in production smoke
 Public Profile	Cover, logo, amenities, trainers, public plans	Check mobile width too

Section	What to verify tomorrow	Notes
 Billing	SaaS subscription status, plan, mandate state	Owner-only / billing permission
 Audit	Sensitive actions show before/after details	Use this to verify staff actions

Mobile Owner App

Bottom Nav: Command · Approvals · Revenue · Stock

View	What it answers	Test expectation
Command /owner	"What needs my attention right now?"	Metrics fit, no clipped cards
Approvals	"Who is waiting on me?"	Double-tap should not duplicate action
Revenue	"What was collected?"	Empty/error states are readable
Stock	"What might run out?"	Product rows keep stable size
Member detail	"Can I understand one member fast?"	Phone reveal permission gate works

Core Owner Flows

1. Member joins your gym

Public gym page → Plan → Checkout → Payment confirmed → Membership active

└ Approval-required gym:
Owner/Admin approves → Member notified → Active

Verify:

- Plan price and duration are correct.
- Referral/coupon discount is visible before payment.
- New subscription appears in Members and Reports.

2. Attendance exception review

Member scan → Exception flagged → Attendance review → Approve / Reject → Audit log

Verify:

- Reason is visible before acting.
- Approved/rejected status clears stale warning text.
- Action appears in audit history.

3. Staff invite

Staff → Invite → Pick role → Pick branch if Reception → Send invite

Role rules:

- **Admin** can run operations but should not become platform admin.
- **Reception** needs a branch for front-desk work.
- **Trainer** should see coaching/client tools.

4. Billing and SaaS subscription

Billing → Review plan → Payment/mandate status → Renewal state

Verify:

- Billing page does not show internal errors.
 - Trial/active/suspended language is clear.
 - Platform subscription state matches what platform operator sees.
-

✓ Owner Production Smoke Checklist

Use this before telling staff to start real production testing:

- ☐ /dashboard loads without console/server errors.
 - ☐ Members, Plans, Attendance, Payments, Shop, Reports, Staff, Branches, Notifications, Public Profile, Billing all open.
 - ☐ Public profile at /g/ [username] looks correct on mobile and desktop.
 - ☐ QR display opens and shows a fresh code.
 - ☐ CSV export downloads at least one report.
 - ☐ Audit log opens and has recent entries.
 - ☐ Mobile owner views have no clipped bottom nav, black-on-black text, or unstable card heights.
-

⚠ Good-to-Know Rules

- **Owner and Admin are not the same.** Owner can control business-critical settings and billing; Admin is operational.
- **Audit is the source of truth** for sensitive actions.
- **AI drafts never auto-publish.** A trainer or permitted staff member must review first.
- **Mock providers are not production behavior.** Production OTP, payment, push, and email must use live configured providers.

Admin Handbook

You operate the gym for the owner. Admins can run most day-to-day business workflows, but owner-only billing/business-control decisions remain restricted.

Admin vs Owner

Area	Admin	Owner
Members and approvals	✅ Yes	✅ Yes
Plans, offers, coupons, referrals	✅ Yes	✅ Yes
Attendance and payments operations	✅ Yes	✅ Yes
Staff operations	✅ Usually yes, based on permissions	✅ Yes
Billing / SaaS subscription	⚠️ Permission-gated	✅ Yes
Platform admin	❌ Never	❌ Unless separately platform admin

Rule of thumb: Admins run the gym. Owners control the business account.

Admin First 10 Minutes

1. Sign in → /dashboard
2. Confirm branch selector and active gym
3. Review Today board
4. Review pending member approvals
5. Check Attendance exceptions
6. Check Payments and Shop orders
7. Send only safe/test notifications during smoke

Admin Dashboard Areas

Section	What to test	Healthy state
 Today	Operational summary	Metrics load; no owner-only dead ends
 Members	Search, detail, approvals	Permission errors explain next step
 Plans	Create/edit plans if permitted	Pricing/duration visible
 Promotions	Coupons, offers, referrals	Codes and rules are readable

Section	What to test	Healthy state
 Attendance	Exceptions, QR display access	QR and review actions work
 Payments	Offline payment, refunds view	Real refunds require caution
 Shop	Products, orders, fulfilment status	Stock changes audit correctly
 Reports	CSV downloads	Exports complete
 Staff	Invite/manage staff if permitted	Role labels are clear
 Notifications	Templates, history, composer	Avoid mass-send in production smoke
 Audit	Review recent admin activity	Action details open

Admin Mobile Surface

Admins use the owner operational mobile surface:

```
Mobile route: /owner
Views: Command · Approvals · Revenue · Stock
```

Verify:

- Header says **Admin** where role-specific.
- Owner-only actions are hidden or permission-gated.
- Approvals and revenue views work without duplicate submissions.

Core Admin Flows

1. Approve a member

```
Dashboard → Members / Today approvals → Open request → Approve / Reject
```

Verify:

- Reason and member details are visible.

- Member gets the correct next state.
- Audit log shows the admin action.

2. Update plan or promotion

Plans / Coupons / Offers / Referrals → Edit → Save → Public/member state updates

Production caution:

- Do not change real prices or live offer rules during smoke unless the owner asked for it.

3. Record operations

Payments → Record offline payment
Shop → Update order/stock
Attendance → Approve/reject exception

Verify:

- Confirmation appears for sensitive actions.
- Double-tap protection prevents duplicates.
- Audit history records who did it.

Admin Production Smoke Checklist

- ☐ Admin login opens /dashboard.
 - ☐ Admin can access member, plan, attendance, payment, shop, reports, staff, notification, audit areas allowed by permissions.
 - ☐ Owner-only/billing actions are clearly restricted if admin lacks permission.
 - ☐ Mobile /owner command view works as Admin.
 - ☐ No clipped text in action buttons, cards, or metric tiles.
 - ☐ Permission failures are readable and non-scary.
-

Good-to-Know Rules

- **Admin is powerful.** Use staging/test data for destructive checks.
- **Admin is not platform.** /platform should remain blocked.
- **Every sensitive admin action should be auditable.**
- **When the UI blocks you, escalate to Owner instead of working around it.**

Receptionist Handbook

You run the front desk. The desk surface is built for speed, confidence, and one member at a time.

Daily Desk Flow

Start shift → Open /desk or mobile /reception
Walk-in arrives → Search member / enter code
Action needed → Approve scan, record payment, fulfil order, or escalate
End shift → Confirm totals and pending queue

Production testing rule: use a test member/order for payments and pickup fulfilment. Do not mark a real customer order fulfilled unless the item is actually handed over.

Web Desk

URL	Use for	Healthy state
/desk	Queue, member lookup, manual payment, pickup fulfilment	Fast search, clear active member panel
/desk/qr	Desk QR route	Shows QR display or routes correctly

URL	Use for	Healthy state
/dashboard/attendance	Owner/admin attendance review	Only if you have permission
/dashboard/attendance/qr-display	Entrance QR display	Useful on a larger screen

Mobile Desk Screens

Bottom Nav: Desk · Members · Payments · Orders

Screen	What to verify	Healthy state
 Desk /reception	Verify code, recent scans, active member card	Outcome toast + haptic feedback
 Members	Search, phone reveal, member status	Phone reveal permission gate works
 Payments	Record renewal/offline payment	Double-tap does not duplicate payment
 Orders	Verify pickup code, fulfil order	Confirm action protects fulfilment

Core Desk Actions

1. Verify attendance code

Desk → Enter member/attendance code → Verify

- ✓ Approved: member may enter
- ⌚ Pending: wait for owner/admin review
- ✗ Rejected: tell member the reason and next step

Verify:

- Success clears stale error/status text.

- Toast appears for every outcome.
- Double-submit is blocked.

2. Record payment

Payments → Select member → Enter amount → Pick mode → Add reference → Confirm

Modes:

- Cash
- UPI
- Card
- Bank transfer
- Other

Verify:

- Amount field handles invalid input safely.
- Confirmation is required.
- Audit log entry is created.

3. Fulfil shop pickup

Orders → Select READY order → Ask for pickup code → Verify → Fulfil

If code does not match:

- Re-ask member to open Shop → Order detail.
- Escalate to owner/admin if the member cannot prove the order.

Verify:

- Pickup code entry fits.
- Fulfil action has a confirmation step.
- Order status updates once only.

4. Phone reveal

Verify:

- Staff without permission cannot reveal.
- Audit-log failure shows a toast.

✓ Reception Production Smoke Checklist

- ☐ /desk opens for receptionist account.
- ☐ Mobile Desk, Members, Payments, Orders tabs open.
- ☐ Code verify shows success/pending/rejected states using demo/test data.
- ☐ Manual payment form blocks duplicate taps.
- ☐ Pickup fulfilment requires confirmation.
- ☐ Phone reveal permission gate is visible.
- ☐ Bottom nav is evenly distributed and does not clip text.
- ☐ No black-on-black text in cards, sheets, or toasts.

⚠ Good-to-Know Rules

- **One active member dominates the screen.**
- **Search should always be easy to reach.**
- **When unsure, hold/escalate instead of forcing approval.**
- **Every sensitive desk action should leave an audit trail.**

Trainer Handbook

You coach members. Your primary workplace is the mobile trainer surface. Web /coach is a lightweight command view and handoff surface.

Daily Trainer Flow

Morning → Open /trainer → Check clients needing attention
Before session → Open client detail → Review plan + recent progress
After session → Add note / update plan / log progress
Weekly → Review AI draft → Edit → Publish only when correct

Production testing rule: use a test client before publishing plans or notes. Trainer notes may be private, but they still affect the member record.

Mobile Trainer Screens

Trainer tabs: Home · Clients · Plans · Inbox
Client detail tabs: Summary · Plans · Progress · Notes · AI Draft

Screen	What to verify	Healthy state
 Home /trainer	Today summary, attention cards, schedule	Cards are stable and readable
 Clients	Client list, search/sort, status chips	Long names do not clip awkwardly
 Plans	Templates, assignments, drafts	Actions are gated by permission
 Inbox	Member messages / nudges	Empty state is clear
 Client detail /trainer/client/[id]	Summary, plan, progress, notes	Tabs fit and preserve state
 AI Draft	Draft review/edit/publish	Nothing reaches member before publish

Web Trainer Surface

URL	Use for
/coach	Trainer command overview, assigned clients, quick actions
/me	Account/profile handoff

Verify tomorrow:

- /coach loads without Server Component or icon serialization errors.
- KPI tiles render for assigned clients, plans, sessions, notes.
- Quick action rows route correctly.
- Sign out works.

Core Trainer Flows

1. Assign a plan

```
Clients → Pick client → Plans tab → Assign Plan  
→ Choose type → Set cadence/duration → Publish → Member sees it
```

Plan types:

- Workout
- Diet
- Habits
- Hybrid / custom where enabled

Verify:

- Member receives the plan in their Plans tab.
- Long exercise names and rep text wrap cleanly.
- Publish button cannot be double-fired.

2. Review an AI draft

```
Client detail → AI Draft → Read → Edit → Confirm publish
```

Rules:

- AI draft is never visible to the member until published.
- Trainer remains accountable for correctness.
- If AI provider is disabled, the UI should show an unavailable state, not a crash.

3. Add notes

Client detail → Notes → Add note → Choose visibility → Save

Visibility:

- **Trainer-only:** visible to owner/trainer, not member.
- **Plan/member note:** visible inside member plan where supported.

4. Check progress

Client detail → Progress → Review adherence / body progress / recent sessions

Verify:

- Graphs/cards are readable on small phones.
- Empty progress states explain what the member should do next.

Trainer Production Smoke Checklist

- ☐ Login as trainer routes to /coach on web or /trainer on mobile.
- ☐ Home, Clients, Plans, Inbox all open.
- ☐ Client detail opens every tab.
- ☐ Notes save with the correct visibility.
- ☐ AI draft unavailable/review/publish states are clear.
- ☐ Member can see published plan.
- ☐ No clipped tab labels, card headers, or bottom nav labels.

Good-to-Know Rules

- **AI is an assistant, not an autopilot.**
- **Trainer access is client-scoped.** Trainers should not see unrelated members.
- **Owners/admins can manage trainers,** but trainer day-to-day work stays mobile-first.
- **Permission errors should be friendly** and explain who can help.

Member Handbook

You are a gym member. Your job is simple: join the right gym, scan in, follow your plan, buy what you need, and renew on time.

First 5 Minutes

Step	What to do	Where
1	Sign in or create account	Mobile app or /login
2	Find your gym	/gyms or mobile Home → Find gyms
3	Open gym profile	/g/[username]
4	Choose plan / request access	Gym profile → Join
5	Check in	Mobile Scan tab

Production note: test accounts using 000000 are local/staging only. In production, use the real OTP/SSO flow.

Mobile Screens

Bottom Nav: Home · Scan · Plans · Shop · Profile

Screen	What to verify	Healthy state
 Home /	Membership card, completion ring, renew CTA	Days left and status are readable
 Scan /scan	Camera permission, QR scan, manual code fallback	No auto-permission request on launch
 Attendance result /attendance/[id]	Approved, pending, rejected states	Clear status + next action
 Plans /plans	Workout/diet/habit plan detail	Assigned plan opens cleanly
 Shop /shop	Product cards, cart, checkout, pickup code	Adding to cart does not resize cards weirdly
 Notifications /notifications	Unread, empty state, settings CTA	Copy is readable, no clipped rows
 Membership /membership	History, renewal, payments	Sticky renewal button fits text
 Profile /profile	Phone/email, privacy, language, export/delete	Buttons and labels fit

Web Entry Points

URL	What it does
/gyms	Search public gyms by name/city
/g/[username]	Public gym profile, facilities, plans, trainers
/join/[username]	Join flow with referral/coupon support
/r/[code]	Referral link entry
/checkout/[sessionId]	Payment checkout
/me	Member web account handoff

Core Member Flows

1. Join a gym

Find Gym → Open Profile → Pick Plan → Apply Coupon / Referral → Pay → Active

Special cases:

- **Approval required:** request access first, then wait for owner/admin approval.
- **Invite only:** enter invite/referral code before checkout.
- **Minor member:** guardian consent is required before checkout.

Verify:

- Plan price, duration, discount, and final amount are visible.
- Payment success returns to a clear membership state.
- Failed or unavailable payment shows a friendly retry path.

2. Check in

Scan tab → Point at QR → Result screen

- ✓ Approved: check-in recorded
- ⌚ Pending: desk/owner review needed
- ✗ Rejected: reason + next action

Fallback:

Scan tab → Enter code manually → Submit

Verify:

- QR placeholder/icon is correctly sized.
- Manual code can be copied/pasted.
- Camera-denied state explains how to continue.

3. Follow a plan and track progress

Plans → Open assigned plan → Mark exercise / habit → Save progress

Verify:

- Haptics fire on key toggles.
- Long exercise names do not clip.
- Completion state updates without shrinking cards.

4. Buy from shop

Shop → Add item → Cart → Checkout → Pickup code → Desk verifies pickup

Verify:

- Product card height stays stable after adding to cart.
- Cart total is clear.
- Pickup code is tappable/copyable.

Member Production Smoke Checklist

- ☐ Login works with real production OTP/SSO.
- ☐ Home loads the active membership state.
- ☐ Completion ring is centered and readable.
- ☐ Scan opens permission flow and manual fallback.
- ☐ Plans, Shop, Notifications, Membership, Profile all open.
- ☐ Cart and checkout display the correct amount.
- ☐ Renewal CTA text fits on small phones.
- ☐ Bottom nav is evenly spaced and does not bleed into the safe area.

Good-to-Know Rules

- **The big lime action is usually the next best step.**
- **Your status comes first:** active, expired, pending, rejected, or renewal due.
- **Codes are copyable** wherever the app shows referral, pickup, or attendance codes.
- **Privacy requests** live in Profile and should show export/delete options clearly.

Platform Operator Handbook

You are an internal platform operator. You can see cross-gym health, provider readiness, SaaS subscriptions, and safety controls. This is controlled by `User.isPlatformAdmin`; it is not a gym role.

Operator Entry Points

URL	What it shows	Production safety
/platform	Organisations, SaaS plan/status, safety and usage	Read-only smoke is safe
/platform/gyms	Gym list and org status	Suspend/reactivate only test orgs
/platform/subscriptions	SaaS subscription and mandate state	Verify billing status carefully
/platform/provider-status	Provider health	Read-only
/api/platform/provider-status	JSON provider readiness	Read-only

Provider Status Explained

Symbol	Status	Meaning
✓	READY	Configured and responding
⚠	DEGRADED	Configured but slow/failing
✗	MISSING	Required config is absent
🔒	MOCK	Safe for local/staging, not normal production

Providers checked:

```
✉ Email      Resend / SMTP / mock
💳 Payments  Razorpay / mock / disabled
🗄 Storage    Supabase / S3 / R2 / local
🤖 AI         OpenAI / disabled / mock
🔔 Push       Expo / mock
💬 SMS        MSG91 / webhook / mock
🗺 Maps       Google / mock
🇮🇹 Sentry    Error reporting
➤ Rate limit Upstash / memory
```

Security rule: show missing env-var names and request IDs only. Never expose secret values.

Organisation Management

Action	Where	Test expectation
View all gyms	/platform	Search/sort/filter works
Review org status	Org row/detail	Trial/active/suspended/churned are clear
Suspend test org	Platform org action	Gym access blocks safely
Reactivate test org	Platform org action	Gym access returns
Review subscription	/platform/subscriptions	Mandate/payment state matches owner billing
Review assistant/safety	Platform assistant/safety areas	No customer secrets exposed

Org statuses:

- TRIAL — free trial, time-limited
- ACTIVE — paid and running
- SUSPENDED — access blocked; owner notified
- CHURNED — cancelled/lapsed

SaaS Billing Checks

Owner Billing page ↔ Platform Subscriptions page ↔ Database subscription/mandate state

Verify:

- Owner sees the same status the platform sees.
- Missing mandate/payment does not crash the page.
- Suspended orgs cannot keep using operational features.
- Trial countdown and renewal language are clear.

User-Facing Status Copy

User-facing text	Internal meaning
✓ Check-ins working	QR, attendance APIs, and DB are healthy
✓ Payments working	Checkout and webhooks are healthy
✓ App & web working	Web/API/mobile handoff is healthy
⚠ Payments degraded	Payment provider slow/failing
✗ Check-ins down	QR or attendance service failing

Incident copy rules:

- Use plain language.
- Say who is affected and what they can do.
- Do not mention raw provider internals unless the audience is engineering.

✓ Platform Production Smoke Checklist

- ☐ /platform opens only for platform operator.
- ☐ Owner/admin/reception/trainer/member accounts cannot open /platform.
- ☐ Provider status loads without secret values.
- ☐ Subscriptions page loads without 500s.
- ☐ Test org suspend/reactivate works in staging or test data only.

- ☐ Production logs show no Prisma engine, auth, or provider errors after deploy.
- ☐ Public /status renders and uses calm user-facing language.

⚠ Good-to-Know Rules

- Platform admin is separate from gym roles.
- Provider status is diagnostic, not configuration.
- Production destructive actions need a test org or explicit business approval.
- Logs and request IDs are useful; secrets never belong in UI, docs, or screenshots.

🔑 QA Test Identities

Use these identities for local and staging QA. Production must use real OTP/SSO and approved test data only.

👥 Seeded Accounts

Account	Email	Phone	Code	Primary routes	What you get
👑 Owner	owner@zook.local	—	000000	/dashboard, mobile /owner	Full Aarogya Strength business control
👤 Admin	admin@zook.local	—	000000	/dashboard, mobile /owner	Operational dashboard without owner- only assumptions
🏠 Reception	reception@zook.local	—	000000	/desk, mobile /reception	Check-ins, member lookup, payments, pickup

Account	Email	Phone	Code	Primary routes	What you get
 Trainer	trainer@zook.local	—	000000	/coach, mobile /trainer	Client list, plans, notes, AI drafts
 Member	member@zook.local	+91 98765 43210	000000	/me, mobile member tabs	Membership, attendance, plans, shop
 Minor Member	minor@zook.local	—	000000	Member join/consent flow	Blocked until guardian consent
 Platform	platform@zook.local	—	000000	/platform	Cross-gym status, provider diagnostics, subscriptions

⚠️ 000000 is local/staging only. It must never work in normal production.

✨ Fresh Account (First-Run Testing)

Email: fresh@zook.local
Phone: +91 90000 11111
Code: 000000

Use for: onboarding, empty states, checkout, consent, profile setup, and first-run testing.

Every login with this identifier creates a **new blank user** with no memberships, orders, or profile data. Reset any time by logging out and in again.

⚠️ Fresh identities are blocked at runtime in production. The SEED_DEMO_USERS_ENABLED=true flag gates them.

Demo Gyms

Handle	Gym name	Used by
aarogya-strength	Aarogya Strength	Primary demo gym — owner, member, trainer, Reception
iron-house	Iron House	Secondary — multi-org isolation tests
peaklab	Peak Lab	Tertiary — edge-case flows

End-to-End Smoke Paths

Member flow:

Login as member@zook.local → Home → Scan QR
(use /dashboard/attendance/qr-display)
→ Check-in approved → Plans tab → Tracking → Shop → Add item →
Checkout (mock)
→ Pickup code shown ✓

Reception flow:

Login as reception@zook.local → Desk → Approve pending scan
→ Verify AS-XXXX → Record UPI payment → Fulfil pickup order ✓

Trainer flow:

Login as trainer@zook.local → Clients → Open Nisha Menon
→ Review AI draft → Edit → Publish ✓

Admin web flow:

Login as admin@zook.local → /dashboard → Members / Attendance /
Payments
→ Verify owner-only restrictions are clear ✓

Owner web flow:

Login as owner@zook.local → /dashboard → Today command board
→ Billing → Attendance exceptions → Notifications → Reports →
Audit ✓

Internal platform operator:

Login as platform@zook.local → /platform → Provider status →

Subscriptions

→ Suspend / reactivate test org only ✓

Production Testing Tomorrow

Action	Production guidance
Open public pages	✅ Safe
Log in with real OTP/SSO	✅ Safe
View dashboards	✅ Safe
Create/update/delete data	⚠️ Use a test org/member
Payment/refund checks	⚠️ Use approved test payment path only
Suspend/reactivate	⚠️ Test org only
Mass notifications	❌ Do not send during smoke unless explicitly planned

Deployment Note

Area	Rule
Web/backend	Push main, run DB migration check, deploy Vercel production
Mobile	EAS build/TestFlight/Play internal track required for binary rollout
Staging smoke	pnpm release:preflight plus role matrix
DB ready	pnpm db:deploy on the intended target environment
