

Member Handbook

MEMBER HOME

Test Accounts

- Fresh start: `fresh@zook.local` or `+91 90000 11111`, OTP `000000`.
- Complete demo: `member@zook.local` or `+91 98765 43210`, OTP `000000`.

What Members Can Do

- Find verified gyms by city, name, handle, rating, price, and join mode.
- Open a public gym profile, compare visible plans, review trust signals, and continue on phone.
- Join an open gym immediately or send a request when approval is required.
- Pay securely through the checkout flow and land back with a clear membership state.
- See active membership first: days left, plan name, renewal date, visit status, and the single check-in action.
- Check in by scanning a QR code or entering a desk code when the camera is unavailable.
- Review plans and training from a trainer: workout, diet, and habits live under one Plans area.
- Track workouts, active time, weight, habits, and last workout without color competing for meaning.
- Browse shop items, place orders, track order status, and see payment state.
- Manage profile, phone/email verification, notification preferences, privacy consent, and guardian consent when needed.

Web Entry Points

PUBLIC GYM PROFILE

- `/find` discovers gyms.
- `/g/[username]` shows the public gym profile.
- `/join/[username]` starts public joining.
- `/r/[code]` opens referral joining.
- `/checkout/[sessionId]` completes payment.

Mobile Entry Points

Member check-in

MEMBER CHECK-IN

- `/` opens the member home.
- `/scan` opens check-in.
- `/plans` opens Plans and training.
- `/membership` opens the active membership.
- `/shop` and `/order/[orderId]` cover shop and order state.
- `/notifications` , `/profile` , and `/settings` cover account controls.

Smooth UX Rules

- One filled lime button per screen.
- State before story: days left, payment state, approval state, or sync state comes before detail.
- Demo state is a top strip, never a floating badge over content.
- Empty, loading, and error states should always explain the next action.

Owner Handbook

Owner setup

OWNER SETUP

What Owners Can Do

- Create a gym, set branch details, define public profile copy, and publish a joinable gym page.
- Open Today at the branch: check-ins, collected amount, renewals due, inactive members, and live floor state.
- Resolve the Needs you queue: expiring plans, failed payments, approval requests, trials ending, and high-value inactive members.
- Manage members, subscriptions, attendance, payments, staff, trainers, products, reports, notifications, AI settings, and audit logs.
- Build and publish membership plans grouped by duration, with one clear recommended plan on public pages.
- Show QR codes for desk or entrance check-in.
- Record offline payments with proof and audit context.
- Export reports for attendance, revenue, memberships, shop, and staff operations.
- Invite staff and assign owner, admin, receptionist, and trainer roles.
- Review privacy/audit activity for sensitive operational actions.

Web Entry Points

- `/start-gym` creates the gym.
- `/dashboard` opens Today at the branch.
- `/dashboard/members` manages members and subscriptions.
- `/dashboard/membership-plans` manages public and private plans.
- `/dashboard/attendance` and `/dashboard/attendance/qr-display` manage attendance.
- `/dashboard/payments` handles payment review and offline records.
- `/dashboard/shop/products` manages the shop.
- `/dashboard/reports`, `/dashboard/staff`, `/dashboard/notifications`, `/dashboard/ai`, `/dashboard/public-profile`, and `/dashboard/audit` cover advanced operations.

Mobile Entry Points

- `/owner` opens the owner command center.
- `/owner?view=approvals` focuses approvals.
- `/owner?view=revenue` focuses collections.
- `/owner?view=stock` focuses shop stock.

- `/owner?view=members` opens members.
- `/owner/member/[id]` opens a member detail.

Smooth UX Rules

- The owner home is not a generic dashboard. It answers: is anything on fire today?
- Reports and deep management views are destinations, not competing cards on the home screen.
- Dense tables are good on web when they keep row actions clear.
- Revenue, attendance, and setup state should be visible without modal hunting.

Trainer Handbook

What Trainers Can Do

- Open a client list sorted by who needs attention.
- See each client by adherence first: recent training dots, assigned plan, next session, and notes.
- Review AI-drafted plans before they ever reach a member.
- Assign workout, diet, and habit plans.
- Track progress across sessions, exercises, sets, reps, weight, and adherence.
- Add private trainer notes and keep member-visible plan detail separate.
- See today's sessions and clients who are slipping.
- Use notifications only where permissions allow assigned-client communication.

Mobile Entry Points

- `/trainer` opens trainer Today.
- `/trainer?view=clients` opens the client list.
- `/trainer?view=plans` opens plan templates and assignments.
- `/trainer/client/[id]` opens a client detail.
- `/trainer/client/[id]/ai-draft` opens AI draft review.

Feature Walkthrough

- Start with Today to see sessions happening now.
- Open Clients to sort by needs attention, expiring plan, low adherence, or upcoming session.
- Open a client detail to review the 14-day adherence grid.
- Review the AI draft card when present, edit the plan, then publish manually.
- Check tomorrow's session before the member arrives.

Smooth UX Rules

- AI drafts never assign silently. Trainer review is mandatory.
- The client detail starts with adherence, not gym-level analytics.
- Exercise rows should show set, rep, and weight inline.
- Bottom navigation stays role-specific: Today, Clients, Plans, More.

Receptionist Handbook

What Receptionists Can Do

- Run a live desk flow for check-ins, walk-ins, payments, renewals, shop sales, and day passes.
- Search members by name, phone, or code from a persistent top search.
- Approve, hold, or deny check-ins with large desk-friendly actions.
- Take payments and renew memberships without leaving the desk flow.
- Add new visitors and start walk-in trials.
- Print or display day pass and desk QR flows.
- See today's check-ins, collected amount, and pending items at a glance.
- Review members, payments, and orders from role-specific tabs.

Mobile Entry Points

- `/reception` opens the live desk.
- `/reception?view=members` opens member search and status.
- `/reception?view=payments` opens payment actions.
- `/reception?view=orders` opens shop/order handoff.

Web Entry Points

- `/dashboard/attendance` manages attendance records.
- `/dashboard/attendance/qr-display` shows the desk QR.
- `/dashboard/payments` reviews payments.
- `/dashboard/shop/products` supports shop handoff when permitted.

Feature Walkthrough

- Keep search active at the top of the desk.
- When a member is at the desk, the live check-in card becomes the focus.
- Use quick actions for payment, renewal, shop sale, walk-in trial, and day pass.
- Use today's totals as ambient context, not a competing dashboard.

Smooth UX Rules

- Reception is a tablet task UI, not an owner dashboard.
- One active member at the desk should dominate the screen.
- No accordions for critical alternatives: manual code and desk fallback must stay visible.
- Sync state belongs in chrome so transaction confidence is always visible.

Platform Status Handbook

 Status page

STATUS PAGE

What The Status Page Does

- Shows user-facing health for Check-ins, Payments, and App and web.
- Keeps engineering provider detail behind an engineering view.
- Shows recent incidents and uptime in language a gym owner can understand.
- Lets users subscribe to updates.

Smooth UX Rules

- Public copy answers: is the gym software working?
- Infrastructure labels like Razorpay, Expo, OpenAI, storage, and push providers belong in engineering detail.
- Sandbox or mock mode should be translated into user impact.
- Status cards should stay calm, factual, and short.

QA Test Identities

Use these in local development and staging-style QA where `OTP_FIXED_CODE_DEV=000000` is enabled.

Fresh account

Every successful login with either identifier creates a new blank member account.

- Email: `fresh@zook.local`
- Phone: `+91 90000 11111`
- OTP: `000000`
- Expected result: a fresh user session with no memberships, orders, attendance, or saved profile history.

Fresh identities are blocked in production runtime settings. They exist to test first-run onboarding, empty states, checkout, consent, and profile setup repeatedly without cleaning the database.

Complete demo account

Both identifiers resolve to the same seeded member account.

- Email: `member@zook.local`
- Phone: `+91 98765 43210`
- OTP: `000000`
- Expected result: the full demo journey with Iron Temple membership, plan, attendance, tracking, notifications, shop, and public gym flows.

Use this account for screenshots, role walkthroughs, and end-to-end smoke tests where the app should feel populated.

Deployment note

These identities do not mean production is deployed. Production web deploys require pushing the current branch and promoting a Vercel deployment. Mobile production testing requires an EAS build or TestFlight/App Store build.
